

Patch Manager

Automated Patching of Microsoft Servers and Third-Party Apps

Patch Manager Summary

SolarWinds Patch Manager makes it easy to perform updates across tens of thousands of servers and workstations, and enables you to leverage and extend the capabilities of Microsoft® WSUS or SCCM to report, deploy, and manage third-party and Microsoft patches.

PATCH MANAGER AT A GLANCE

- Decrease security risks and service performance degradation by controlling when and where patches are applied
- Reduce time from weeks to minutes for patching physical and virtual Windows desktops and servers with pre-built, tested patches
- Pass audits and demonstrate compliance with out-of-the-box reports and dashboard views
- Agentless architecture, mass scale, and an easy-to-use interface with no scripting or professional services needed

PATCH MANAGER FEATURES

Simplified Patch Management

SolarWinds Patch Manager simplifies many of the steps in the patch management process—from research, scheduling, deployment, reporting and more—saving you hours of time and making it easier to keep servers and workstations patched and compliant.

Extend Microsoft Windows Server Update Service and System Center Configuration Manager

SolarWinds Patch Manager works with and extends your Microsoft WSUS and SCCM deployments with pre-tested, pre-built updates for Microsoft products and third-party applications from a central point of control.

“ I love the ability to choose specifically what updates are installed on the servers and workstations I managed. I am responsible for over 2,000 nodes, and SolarWinds® Patch Manager makes patch management a breeze. ”

Norman D Easley III, IT Specialist

Patch Physical Servers and Virtual Machines

SolarWinds Patch Manager makes it easier to manage patches on virtual desktops and servers with the ability to patch offline machines, organize virtual machines into groups, and inventory virtual machines enterprise-wide.

Patch Compliance Reporting

SolarWinds Patch Manager provides you with easy-to-use and powerful reporting options, so you can easily determine the status of patches and demonstrate to auditors whether systems are patched and compliant—or find those that aren't.

Consolidated Web Interface

Patch Manager's web user interface lets you view important patch data alongside other SolarWinds products in an integrated web console. You can view the latest available patches, top 10 missing patches, and general health overview of your environment based on which patches have been applied.

Custom Package Wizard

The Custom Package Wizard in SolarWinds Patch Manager gives you an easy way to build packages for any application, without the use of SCUP or complicated scripting. Then you can deploy any MSI, MSP or EXE via Microsoft WSUS or SCCM.

Advanced Before-and-After Package Deployment Actions

SolarWinds Patch Manager's Package Boot™ allows you to create advanced before-and-after package deployment scenarios to help ensure even the most complicated patches (such as Oracle® Java) are deployed successfully—without complicated scripting.

“ This product integrates well with Microsoft products, which we use org wide, and other SolarWinds tools (we use remote desktop and manager functionality for our IT team). It also conveniently sends emails and updates on the status of all machines that our agency uses, which is around 200 computers/devices that are difficult to track otherwise. ”

User in Mental Health Care
Mid-Market (51-200 employees)

“ Offers a wide range of options for remote patching of systems and providing a full accounting of installed patches and reporting. The reporting features are great for keeping track of which computers and when they were patched. ”

Rez S., Computer and Network Security

ABOUT SOLARWINDS

SolarWinds (NYSE:SWI) is a leading provider of simple, powerful, and secure IT management software. Our solutions give organizations worldwide—regardless of type, size, or complexity—the power to accelerate business transformation in today’s hybrid IT environments. We continuously engage with technology professionals— IT service and operations professionals, DevOps and SecOps professionals, and Database Administrators (DBAs) – to understand the challenges they face in maintaining high-performing and highly available IT infrastructures, applications, and environments. The insights we gain from them, in places like our **THWACK** community, allow us to address customers’ needs now, and in the future. Our focus on the user and commitment to excellence in end-to-end hybrid IT management has established SolarWinds as a worldwide leader in solutions for observability, IT service management, application performance, and database management.
